Solid wood furniture

Solid wood furniture at home and in the office have a very special charm and can look timelessly beautiful even after decades, provided they are properly treated and maintained.

At work, in the medical practice and in office rooms, the mechanical durability and practical suitability of the furniture are the most important factors.

In kitchens, furniture is subjected to very different stresses. A worktop must withstand different stresses than the body (*i.e. the supporting elements*) of a cabinet. In general, the inner surfaces of cabinets can be given an easy-care surface with a stain or shellac layer. It makes sense to adapt the treatment and design to the demands of the different surfaces and to use only one product.

In children's rooms, colors should create an invigorating, but also a calming atmosphere. Matching the nuances of the wooden surfaces with those of the walls and ceiling can be imaginative.

LIVOS offers the right oils, waxes, stains and glazes for the respective wooden surfaces, mechanical durability and design requirements. Furthermore, we offer a LIVOS neutral program with odorless products distinguished by specially selected raw materials which is particularly suitable for allergy sufferers, odor-sensitive people and people suffering from environmental illnesses.
