

Application range	Interior: oiled, waxed, sealed and lacquered furniture and wood surfaces – tables, chests of drawers, chairs, panelling. Not suitable for: cabinet interiors.
Technical qualities	Refreshes the surface: it picks up light soiling and gives back a discreet, silky sheen. Economical in use – a wafer-thin application is enough. Fully declared – including the substances that need not be named.
Full declaration	Isoaliphates, linseed oil, linseed stand oil natural resin ester, linseed stand oil, orange oil, dehydrated amino sugar, drying agents (Mn, Zr).
Colour	Clear to slightly honey-toned (colour number approx. 5 Gardner).
Dilution	Ready to use.
Application method	Stir well and apply a test area in an inconspicuous place. Put it on a lint-free cloth and rub it in wafer-thin, on wood in the direction of the grain. Further information on page 2.
Coverage	10 ml/m ² , i.e. 1 l is sufficient for about 100 m ² – considerably more on dense surfaces.
Cleaning	Clean tools immediately after use with SVALOS Thinner No. 222.
Drying time	At 23 °C and 50 % relative humidity 2-8 hours. Warmth shortens the time, cold and high humidity lengthen it.
Specific gravity	approx. 0.82 g/ml.
Notes	Risk of spontaneous combustion from oil-soaked materials Cleaning cloths, polishing pads, sponges and sanding dust soaked with oil heat up as they dry; crumpled together, the heat builds up and can cause a fire. Therefore do not leave them unattended after use: immerse them in water and dispose of them wet, lay them out singly to dry through, or collect them in a closed metal container – soak the contents before emptying it. The product itself is not self-igniting – neither liquid nor applied. Ensure good ventilation during and after application.
Hazard statements  Danger	H304 May be fatal if swallowed and enters airways. EUH066 Repeated exposure may cause skin dryness or cracking. EUH208 Contains d-limonene (orange oil). May produce an allergic reaction. P102 Keep out of reach of children. P301+P310 IF SWALLOWED: Immediately call a POISON CENTER/doctor. P331 Do NOT induce vomiting. P405 Store locked up. P501 Dispose of contents/container to an approved waste disposal plant.
Disposal	According to local regulations. Dried residues: household waste.
Container sizes	0.1 l; 0.25 l; 0.75 l.
Storage	Cool and dry. Unopened shelf life at least 4 years. Transfer residues into smaller containers.

Substrate	The surface must be dry and free from dust. Before the first use, apply a test area in an inconspicuous place – underside, back panel – and wait a day.
Application	A wafer-thin application is enough; too much material remains standing and stays tacky. 1. Put a few drops on a lint-free cloth – not directly onto the furniture. 2. Rub it in thinly and evenly, on wood in the direction of the grain. 3. Polish with a dry cloth until the surface is no longer tacky. If it still is, carry on polishing with a few drops – not with more material.
Heavier soiling	Apply the polish generously, leave it to act for 10–20 minutes and take off the loosened dirt with the cloth. Then polish wafer-thin.
Care interval	As a rule once a year, on heavily used surfaces more often. In between, dry dusting is enough; wipe with a damp, not wet, cloth using TRENA pH-Neutral Cleaner No. 556 in the water.
Notes	Coatings of other makes The test area shows whether the existing coating is compatible. An unpleasant odour, a permanently tacky spot or a lacquer turning milky speak against the application. White surfaces On white and very pale surfaces yellowing is possible – test these particularly carefully. Skin formation A skin may form on the surface in an opened container – the oils cross-link with atmospheric oxygen. Remove the skin, the oil underneath remains fully usable. The less air above the rest, the less often it occurs.
