Protection & care for wood outdoors

Rain, sun, snow and wind

Wood is exposed to many stresses in outdoor areas. The right **LIVOS products** protect for years – with natural, renewable raw materials such as linseed oil.

Windows and doors

The same coating structure on both sides – indoors and outdoors – ensures an even moisture transport. **Transparent coatings** of windows and doors can be obtained with the ALIS Decking Oil, **opaque coatings** with the VINDO Natural Gloss Paint.

Many products for outdoor use contain biocides. Due to the general basic rule for the paint structure, these substances would also be used indoors. Not so with LIVOS – our oils are **free of biocides.**

Garden furniture

In order for you to enjoy your garden furniture for a long time, **suitable protection against weather influences** is essential. It depends on the type of wood: For pine and spruce wood ADAO External Primer is used as protection against blues, for oak wood LINUS Penetrating Oak Priming Oil. Both types of wood can then be finished with the KALDET All-weather Stain. Alternatively, ALIS Decking Oil can be used without any primer at all. Use ALIS Teak Oil for teak garden furniture and ALIS Robinia Oil for robinia wood.

Fences/cold frames and flower boxes

In addition to the DONNOS Penetrating Fence Stain in numerous colors, fences as well as cold frames and flower boxes can be treated with the ALIS Decking Oil. As a rule, these have slightly rougher wood, which allows fungi to settle more quickly. **Eliminate such infestation** soon after it occurs with the GLOUROS Cleaner.

Facades, terraces and playground equipment

Many outdoor wood species are declared weather resistant. Without treatment and maintenance, however, they can quickly turn grey or black. Treating them with the ALIS Decking oil protects them **against decay** without priming.

For an **opaque, semi-glossy surface** we recommend the AMELLOS Natural All-weather Paint. It is suitable for sanded surfaces, e.g. facades, half-timbered structures, log beams. As with garden furniture, priming is necessary.

Delaying wood greying

Larch and Douglas fir are very robust woods for outdoor use. LINUS Varnish for Larch delays the natural process of greying.

For lifelong enjoyment of your surfaces

Instructions for the cleaning, maintaining and renovation of exterior wood

GLOUROS Natural Siding and Masonry Cleaner No. 1806

1) Cleaning

Fine dust, microorganisms, soot – depending on the roughness of the wood, its position and the environmental pollution, the wooden surfaces suffer. Regular cleaning reduces the load.

2) Maintaining

You recognize the need for maintenance by a decrease in gloss *(dullness)*, or if the coating chalks slightly. Carry out step 1) before maintaining.

KALDET After Care No. 276

3) Renovation

Renovation is recommended in case of cracks, dullness and heavy chalking. After cleaning *(step 1)*, the surface must be sanded, then carry out steps 1) and 2).
