# **Instructions for dyeing with the WEJA Plant Dye Kit**

#### **Depth of color shades**

By using the WEJA dyeing kit you can produce different levels of color intensity. Generally, an increase in the amount of textile and water leads to a decrease in color intensity. The following table will serve as a reference for the choice of the amount of textile and water. For dyeing in the washing machine refer to the amounts corresponding to 20 I and 25 I.

| depth of color shades | amount of water [I] | WEJA-dyeing kit | weight of textile [g] |
|-----------------------|---------------------|-----------------|-----------------------|
| strong                | 7,5                 | 50 g            | 100                   |
|                       | 20                  | 250 g           | 500                   |
|                       | 40                  | 2 x 250 g       | 1000                  |
| standard              | 10                  | 50 g            | 150                   |
|                       | 25                  | 250 g           | 750                   |
|                       | 50                  | 2 x 250 g       | 1500                  |
| pastel                | 20                  | 50 g            | 300                   |
|                       | 50                  | 250 g           | 1500                  |
|                       | 100                 | 2 x 250 g       | 3000                  |

**Tip:** WEJA Elderberry blue is not suitable for pastel-dyeing.

### Dyeing in the washing machine

- 1. Take the numbered bags as well as the bottle with the conditioner from the WEJA dyeing kit.
- 2. Place the content of the PE bottle (1)(conditioner) and the material to be dyed in the washing machine.
- 3. Close the washing machine.
- 4. Set the temperature and washing time on your washing machine as indicated on page 2. Select a programme with rinsing process, but do not spin if possible. Start the programme.
- 5. Open the washing machine on completion of the programme and place the bag marked with the next highest number in the washing machine and proceed as described in steps 3 5. **Do not open or empty the bag!** Use any remaining bags in the same way.

**Tips for use:** If you can't set the time and/or temperature on your washing machine, select the boiling-programme. If the boiling-programme is shorter than the required duration, you will have to turn off the washing machine before the rinsing starts, reset the boiling-programme to the start and turn the washing machine on again. The boiling-programme will start again. Using this technique you can extend the duration of the boiling-programme to meet the requirements. With dyeing, a color change of the rubber, plastic and PVC pipes in the washing machine cannot be excluded. We recommend a boiling programme without any washing directly after dying, to clean the machine and other parts properly. Machine dying can built up a lot of froth or lather.

## Dyeing in an open pot

- 1. See page 1.
- 2. Place the content of the PE bottle (1)(conditioner) and the textile that is to be dyed in a pot containing cold water.
- 3. Heat up slowly to the temperature indicated on page 2.
- 4. Keep temperature at a constant level for the duration indicated and keep moving the textile around in the fluid.
- 5. Let fluid cool.
- 6. Take textile out of the pot and rinse it with water.
- 7. Empty the pot.
- 8. Replace the rinsed textile in the pot, refill it with cold water, add the bag marked with the next highest number and proceed as described in steps 3 7. **Do not open or empty the bag!** Use any remaining bags in the same way.

**Tips for use:** Through the slow heating and cooling process, you retain the natural fibre structure. Keeping the textile moving reduces stains. Dyeing in washing machines usually produces a more even dye.

| Dye               | PE bottle / Bag | time (min) | Temperatur (°C) |
|-------------------|-----------------|------------|-----------------|
| Mignonette yellow | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
| Lac-red           | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
|                   | 3               | 30         | 80              |
| Nut brown         | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
| Catechu russet    | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
| Madder apricot    | 1               | 30         | 98              |
|                   | 2               | 60         | 80              |
| Elderberry blue   | 1               | 30         | 98              |
|                   | 2               | 30         | 80              |
|                   | 3               | 60         | 98              |
|                   | 4               | 30         | 80              |
| Mango             | 1               | 30         | 98              |
|                   | 2               | 60         | 80              |
|                   | 3               | 30         | 80              |
| Anthracite        | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
| Olive green       | 1               | 30         | 98              |
|                   | 2               | 60         | 98              |
| Mistel green*     | 1               | 30         | 98              |
|                   | 2               | 30         | 80              |
|                   | 3               | 60         | 98              |

<sup>\*</sup> low fastness to light

**Tip:** Treating hemp at 98°C doesn't usually harm the fibre. However, do follow the washing instructions on your textiles.

#### Washing the dyed textiles

Dyed textiles should only be washed with a detergent for color, free of brighteners/bleach and at temperatures up to 40° C. Dyed textiles should the first time be washed separately.
