

LIVOS for furniture

Solid wooden furniture

Whether in the house or in the office, solid wooden furniture has a very special charm and brings warmth to any room. Even after many years, solid wooden furniture can still create this feeling, while being timeless and beautiful; assuming they receive the appropriate care and maintenance.

Furniture in **living- and bedrooms** should be easy to care. Moreover, the natural warmth and the character of the wood should be maintained. In **working rooms, offices and practice rooms** we need to give special attention to the furniture because of the mechanical wear and tear of those surfaces.

Kitchen furniture require a customized treatment according to the intensity of their usage. A countertop for example has another function than the supporting elements of a cupboard. Interior parts and visible elements have different functions, and as a result, they need to be treated differently. Usually, the inner face of a board can be treated with stain or schellac to get an easy-care surface. The treatment and the design of different wooden surfaces should be adjusted by the specific demands.

In **children's rooms**, colors should be animating, but sometimes also create a relaxing atmosphere. Colors can have a wonderful variety of effects here.

For all the different types of surfaces, exposure, and designs, LIVOS has suitable oils, waxes, paints and stains. For the person, prone to allergies and for those who are sensitive to odors or other environmental influences, LIVOS has developed the product range **LIVOS neutral** which offers odorless products made of special selected raw materials.

On the reverse side you will find an overview of the LIVOS products especially suited for the treatment of furniture and a summary of their application range.

For further information, please contact your LIVOS retailer or contact us directly. You can also visit our website www.livos.de or call our hotline +49(0)5825-8830.

Indoor pollution originating from synthetic coatings or paints often causes allergies and affects the immune system. LIVOS is the first industrial manufacturer of paints, stains, and lacquers made of natural and health-friendly raw materials. Thus, for over 30 years, LIVOS has combined highest quality to protect humans and nature.

***Please note:** Since the beginning of 2007, KALDET Transparent Wood Stain 270 has been produced according to the neutral standards. KALDET products of neutral quality can be identified by having the batch number 80000 or higher. In case of doubt, please ask your retailer specifically for products with neutral quality batch numbers.

As far as technically possible, LIVOS dispensed with solvents in the neutral product range. As a result, surfaces treated with LIVOS neutral are slightly less resilient than surfaces treated with LIVOS classic, therefore they require a little bit more care and maintenance.

If you have further questions regarding the use or application of LIVOS products, please contact your LIVOS retailer or our LIVOS service team. Please read the Technical Data Sheet of the products and follow the instructions carefully.
