## LIVOS for kitchen

### Solid wooden kitchen

**Solid wooden kitchen** exude coziness and comfortableness - and in some cases, they are the heart of the apartment or house.

**Kitchen furniture** are usually made of different kinds of wood: soft wood is often used for the supporting and visible elements like corpuses and fronts. In contrast to that, countertops are made of maple, beech or beech multiplex.

Wether soft- or hardwood, produced industriell or handmade: LIVOS offers you a wide range of products for oiling, waxing or varnishing of every surface, any color preferences can be fulfilled and surface properties can be kept or created.

Solid wooden surfaces are durable, water-resistant and antistatic, if they are saturated with oil and treated film-forming. It is easy to refresh them. If they are exposed to a high incidence of light, it is necessary to mind the UV-protection. The surfaces are protected against water, grease and other dirt if they are treated with the right maintenance.

In addition to that, the LIVOS neutral line offers odorless products, which stand out due to careful selected raw materials, for those who are prone to allergies, odor sensitives and sufferers of enviromental diseases.

On the reverse side you will find an overview of the **LIVOS** products which are suitable for kitchen.

For further information, please appeal your LIVOS retailer or contact us directly: +49(0)5825 - 88 30.

Indoor pollution originating from synthetic coatings or paints often causes allergies and affects the immune system.

LIVOS is the first industrial manufacturer of paints, stains, and lacquers made of natural and health-friendly raw materials. Thus, for over 30 years, LIVOS has combined highest quality to protect humans and nature.

As far as technically possible, LIVOS dispensed with solvents in the neutral product range. As a result, surfaces treated with LIVOS neutral are slightly less resilient than surfaces treated with LIVOS classic, therefore they require a little bit more care and maintenance.

If you have further questions regarding the use or application of LIVOS products, please contact your LIVOS retailer or our LIVOS service team. Please read the Technical Data Sheet of the products and follow the instructions carefully.
