

LIVOS for windows

Restore the brilliance of your windows

Windows are central elements of every house. If they are made of wood, the windows should be free of harmful substances and irritating odors. It is important that they are permeable for water vapor that migrates in the summer more from outside to inside and in winter from the inside out. Consequently, it is recommended to choose non-polluting and environmentally friendly products for treating your windows.

LIVOS has a whole range of such products. From staining to varnishing, from white to many different colors: **LIVOS** can offer you the suitable product for the window coating of your choice. We have oils for priming, varnishes and stains, as well as products for cleaning and maintenance - all of them are free of harmful substances, environmentally sustainable and health-friendly.

LIVOS also offers special **neutral products** for the **allergy-prone** and those who are **sensitive to odors** or suffering from **multiple chemical sensitivity (MCS)**. These products are odorless and composed of carefully selected ingredients.

On the reverse side you will find an overview of the **LIVOS** products especially suited for the treatment of windows and a summary of their application range.

For further information, especially to care instructions, please contact your **LIVOS** retailer or contact us directly.

You can also visit our website www.livos.de or call our hotline +49(0)5825-8830.
