

LIVOS

for exterior wood

For exterior wood

New coatings and renovations for all kinds of wood

Exterior wood is exposed to a variety of stressing factors such as sun, wind, moisture and air pollution, as well as constantly ever-changing temperatures. But if the right coating is applied to professional constructions, exterior wood has a unlimited durability.

LIVOS protects wood just like trees do. For more than 35 years LIVOS is using active ingredients of plants in order to treat and maintain wood. Make use of this knowledge! LIVOS also has the right coating material for your exterior facade, your terrace, your exterior doors and windows in many colors.

For hard- and softwood, primers are necessary to lower the absorbency of the wood and to obtain a good adhesion of the stains and lacquers. Furthermore a reliable protection against blue-staining fungi is reached.

On the reverse side, you will find an overview of the products that we recommend for coating and treating exterior wood.

For further information please contact your local **LIVOS** retailer or contact us directly. You can also visit our website www.livos.de or call our hotline +49(0)5825-8830.
